Part 1: Computational Reproducibility

Required

☐ All code runs completely on a new computer.
☐ The master script re-creates all results as they appear in the paper.

Recommended

☐ All in-text numerical citations that are not drawn directly from tables and figures are reproduced by code provided in the replication package.
☑ Scripts for data cleaning, variable creation, and analysis are separate.
☑ Analysis scripts do not include any data cleaning or variable creation, unless necessary for the creation of a table or graphic.
☐ All code is well-commented and formatted, such that one can easily identify functional chunks of code and evaluate whether they correctly implement the econometric or statistical process described.
☐ All intermediate data sets can be reproduced from the raw data.
☐ All final data sets can be reproduced from the data submitted.

Part 2: Data and Documentation Access

Data citation

URL: [   ]   ☐ Data is public

DOI: [   ]

Code repository

URL: [https://github.com/dime-worldbank/moz-proirri-savings]   ☑ Code repository is public

Study registration

URL: [https://www.socialscienceregistry.org/trials/937/history/5921]   ☑ Study registration is public

Pre-analysis plan

URL: [   ]   ☐ Pre-analysis plan is public

Other document: [   ]

URL: [   ]   ☐ Document is public

Other document: [   ]
